

1)First open the code in visual studio.

2)Then install the following packages using `npm install nameOfThePackage`

- `"bootstrap",`
- `"express",`
- `"express-handlebars",`
- `"express-session",`
- `"hbs"`
- `"mysql",`
- `"mysql2",`
- `"nodemon",`

But keep this thing in mind install express globally.

3)Now open the MySQL Workbench then import the given database .

4)Now go to VS code and modify the `connection.js` file according to you MySQL Workbench credential so that connection can be stabilized between application code and MySQL Workbench. For Example:

- `host: "localhost",`
- `user: "root",`
- `password: 'root',`
- `database: "NodeJSAssignment",`
- `port: 3306`

5)Now go to VS code and run the code using `nodemon ./express` in the terminal.

6)finally run the code on `http://localhost:4000`
